

/// AI AUTOMATION SPECIALIST • TELEGRAM BOTS & CLAUDE API

Mykyta Kalchevsky.

I build production Telegram bots, LLM-powered tools, and full-stack web apps that businesses actually rely on. From a 16,003-record ECU lookup bot to a crypto DCA trading bot to a 7-language firmware marketplace — six projects, zero co-founders.

01 About

// who • what • why

15 years building and running networks taught me one thing: *code is easy, keeping it alive is hard*. Now I bring that operations mindset to AI automation — building bots, integrations, and web platforms that don't just work in a demo, they survive a Tuesday at 3 AM. I work with Claude API, Python, and React, ship to DigitalOcean, and treat every project like it has paying customers behind it. Because mine do.
