FULL-STACK DEVELOPER · AI AUTOMATION

Mykyta Kalchevsky.

I build full-stack websites and web apps, front end to back end, and the AI automation behind them, that real businesses **run on**. My newest build is a live embroidery-atelier storefront in Florida; my flagship before it, a bilingual Ukrainian e-commerce store. Seven shipped projects, zero co-founders.

About

// solo, front to back

I build full-stack websites and web apps, front end to back end, and the AI automation behind them, that real businesses **run on**. My flagship is a live custom-embroidery storefront in Florida; I also shipped a bilingual Ukrainian store, a 7-language firmware marketplace, and production Telegram bots powered by the Claude API.

Seven shipped projects, zero co-founders. I design it, code it, deploy it, and keep it running.

FLAGSHIP · LIVE · E-COMMERCE

Exclusive Style, Bespoke Embroidery Atelier

A storefront for a hand-embroidery atelier with its own studio in North Port, Florida. Customers browse embroidered patches and monograms, filter by motif, and design their own patch in an interactive builder. Every design is hand-digitized in-house and the embroidery file is kept, so a repeat order matches the first to the millimeter.

from \$4.50patch builderno minimum orderNorth Port, FL

stack: React · Vite · Firebase (Firestore, Auth, Hosting) · Telegram Bot API · Monobank · PayPal

- **Design-your-own-patch builder** for custom orders, from a single monogram to a full team run
- **Catalog with motif filters:** chevrons, hook-and-loop, 3D PVC, logos, monograms
- **Hand-digitized in-house:** the embroidery file is stored for exact repeat orders
- **Design-forward front end:** animated hero, product pages, ratings and pricing

Apelsin Rozmarin, Full-Stack E-Commerce

A full-stack edible-bouquet store for the Ukrainian market, designed, coded, deployed, and maintained end to end. solo. React storefront on the front, Firebase on the back: 441 live products, a custom admin panel, a real-time order pipeline, and three payment methods. Indexed in Google Merchant Center, SSL grade A.

441 products3 payment railsSSL grade ASolo build

stack: React · Vite · Firebase (Firestore, Auth, Hosting) · Telegram Bot API · Monobank · PayPal

- **Front to back, solo:** React storefront, Firebase data and auth, custom admin for products, inventory, and orders
- **WordPress to React/Vite rebuild:** 301 redirects, Firebase-generated sitemap, preserved SEO and Merchant Center indexing
- **Real-time Telegram notifications** dispatched to operator chats on every order
- **Three payment rails:** Monobank acquiring, IBAN bank transfer, PayPal

● LIVE · PRODUCTION

TuningStore, ECU Firmware Marketplace

A multilingual digital marketplace for ECU calibration files: stock firmware, Stage 1/2 tunes, DPFEGR/AdBlue off, gearbox maps. Customers browse a deep hierarchical catalog, purchase securely, and receive a presigned R2 download link. Built solo from zero.

7 languages301+ files3 payment railsR2 secure delivery

stack: Next.js 16 · TypeScript · Prisma 7 · PostgreSQL (Neon) · NextAuth · Stripe · PayPal · Coinbase · Cloudflare R2 · next-intl

- **4-level catalog:** brand, model, engine, calibration file, 301+ firmware files imported
- **7 languages:** EN, UA, RU, DE, FR, ES, IT via next-intl with full route localization
- **Three payment rails:** Stripe, PayPal, Coinbase Commerce, webhooks handle fulfillment
- **Secure delivery:** Cloudflare R2 presigned URLs, files never exposed publicly

● LIVE · COMMERCIAL

Airbag ECU Lookup Bot

A production Telegram bot serving real customers for an automotive ECU programming service in Glendale, CA. Customers send a vehicle brand and part number; the bot queries a 16,003-record database, returns the correct reprogramming method and price, and books an appointment. Claude Haiku handles messy natural-language inputs.

16,003 recordstwo-bot arch89 MB footprint

stack: Python · Claude Haiku API · python-telegram-bot · openpyxl · DigitalOcean · Linux/cron

- **Two-bot architecture:** client-facing bot plus admin management panel
- **Production deploy:** Ubuntu droplet, persistent screen sessions, cron auto-restart
- **Lean ops:** 89 MB memory footprint, runs comfortably on 1 GB RAM / 1 vCPU
- **API tuning:** eliminated Claude 400 errors via prompt plus DB chunking and temperature 0.1

Demo on request

● LIVE · SAAS

Forge Hub, Multi-Tenant AI Assistant

A multi-tenant Telegram assistant with subscription billing, evolved from a single-user testbed into a productized SaaS. Six modules; every natural-language input is parsed into structured data by Claude Haiku. Per-user data isolation, a 6-language UI, freemium gating with Telegram Stars, and an admin panel.

multi-tenantTelegram Stars6 languages

stack: Python 3.12 · Claude Haiku 4.5 · python-telegram-bot · SQLite · APScheduler · Playwright · Telegram Stars · DigitalOcean

- **Multi-tenant by design:** every table isolated by user_id; Free/Pro tiers gated in code
- **Subscription billing via Telegram Stars** (Pro ~\$8/mo), self-serve upgrade, admin payments view
- **6-language UI** (EN, RU, UA, ES, DE, FR), full i18n, zero hardcoded strings
- **Hardened:** parameterized SQL, per-user rate limiting, prompt-injection isolation

Architecture on request

● LIVE · TRADING

Smart DCA Trade Bot

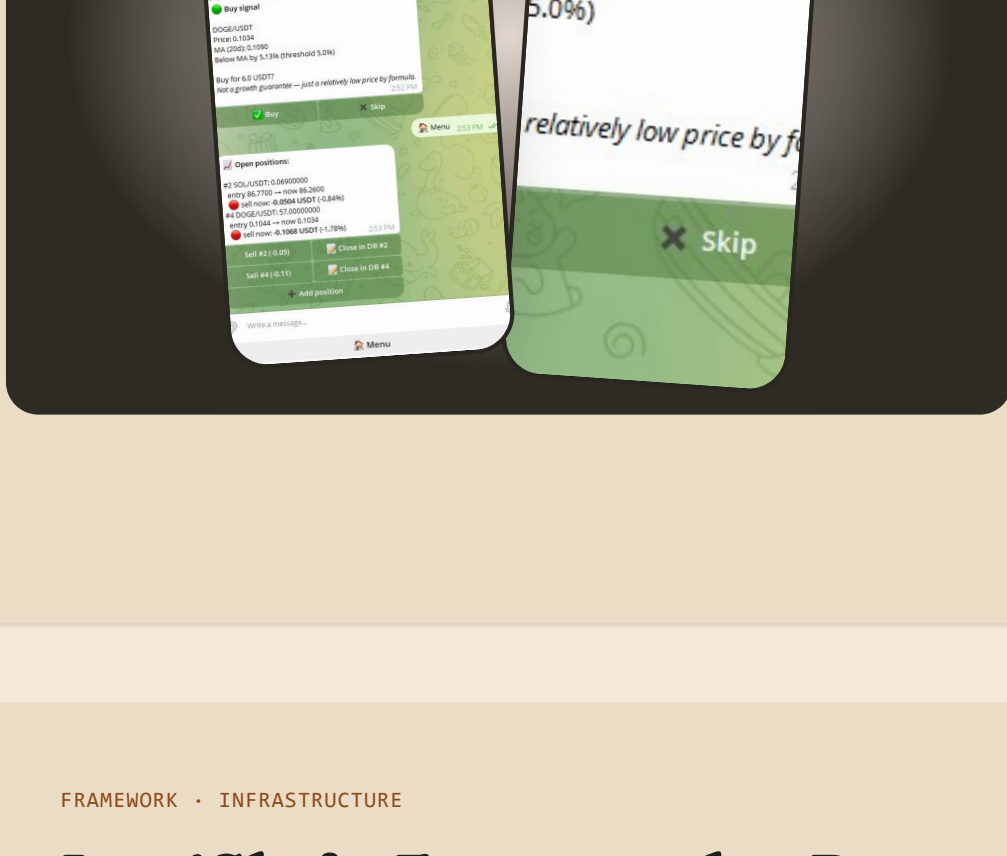

Automated crypto DCA strategy bot for Binance.US, managed entirely via Telegram inline menus, no web interface needed. Scans top coins by volume and momentum, buys on dips below MA20, scales position size with dip depth, and auto-sells on take-profit.

async exchangeauto-modeDRY_RUN safe

stack: Python · ccxt (Binance.US) · python-telegram-bot · APScheduler · SQLite · asyncio · DigitalOcean

- **Smart DCA strategy:** buys when price < MA20 by a configurable threshold, scales with dip depth
- **Auto-mode:** autonomous buy/sell within limits (max invested, min interval between trades)
- **Inline Telegram UI:** positions, P&L, settings, full control without a web dashboard
- **DRY_RUN mode** for safe strategy testing without real orders

Demo on request

FRAMEWORK · INFRASTRUCTURE

LangChain Framework + Bot Fleet

A LangChain-powered Telegram assistant designed as a deployment-ready foundation for client-specific automation. A modular skills directory keeps each capability isolated and swappable per client. It runs alongside three other production bots on a single \$5 droplet: 11 days uptime, zero incidents, load average 0.00.

4 bots · 1 dropletmodular skills11 days uptime

stack: Python · LangChain · ChatAnthropic · screen · cron · modular skills architecture

- **Skill-based modular design:** database, messaging, logging, approval, pricing, orders, inventory
- **Approval workflows** for human-in-the-loop scenarios
- **Fleet management:** 4 production bots co-located on one droplet, isolated screen sessions
- **Reliability proven:** production uptime measured in days, not hours
